```
C:\Users\baghe>git --version
git version 2.44.0.windows.1

C:\Users\baghe>git config --global user.name "ravi-baghel"

C:\Users\baghe>git config --global user.email "a        @gmail.com"

C:\Users\baghe>mkdir 2202031800003

C:\Users\baghe>cd 2202031800003

C:\Users\baghe\2202031800003>
```

Create Git Repository

➢ First created an empty directory named as the enrollment numbers 220203180003 by the following git commands.

  mkdir 2202031800003

 this creates the empty repository in the desktop or documents.

➢ Then create the empty repository named as Assignment-1 by the same command.

 This create the empty directory of Assignment-1.

➢ Now to come out of the Assignment-1.

➢ Now make another directory folder in 2202031800003 as Assignment-2.

To add files int the directory.

- Git –add filename.
- Git status

(it is used to check status of directory).

- Git push

  (it is used to upload a file in git).

- Git commit

  (it is used to commit the repository).

  The Repository is commited after the git commit command.

Repository on Github

- Go to github and click on create directory.
- Now the empty directory is created in github named as 2202031800003.
- Now add file folder named as Assignment_1 and Assignment_2.
- Now add the files in the respective folder as required.
- By using the upload files we can upload files related to website making in git.
